

IMPACT

From 1 January to 31 December 2018, about **350** surveys of explosive hazards were conducted in Al-Anbar, Salah al-Din and Ninewa Governorates in support of high priority stabilization and humanitarian interventions.

- **Removed** approximately **14,500** explosive remnants of war (ERW) and **1,500** improvised explosive devices (IED) including **1,000** suicide belts in liberated areas.
- **Conducted** about **1,200** clearance tasks enabling UNDP and the Government of Iraq to move forward with the rehabilitation of critical infrastructures such as hospitals, schools, bridges etc. and humanitarian actors to move forward with urgent life-saving interventions.
- **Coordinated and completed** **18** joint assessment missions enabling the UN and humanitarian partners to deliver humanitarian aid as soon as liberated areas became accessible.

420 police officers, including **29** female police officers, trained in First Response to identify, mark and report explosive hazards and **23** UN security staff trained to safely respond to IED and explosive hazard threats.

6,000 UNDP cash-for-work employees, **1,000** Governmental staff and **1,400** UN and NGO staff trained to recognize and behave safely in the presence of explosive hazards while working in high-risk environments such as Mosul.

422,300 people received risk education and risk awareness training in schools, internally displaced person (IDP) camps, and other high priority areas.

**Please note that all figures are rounded*

ABOUT

Extensive conflict in Iraq to retake cities from the *Islamic State of Iraq and the Levant* (ISIL) or Da'esh displaced more than 5.8 million people between 2014 and 2017 and resulted in significant explosive hazard contamination following associated military campaigns, in addition to IEDs deliberately left behind by ISIL.

3.9 million people have since returned home and the Government of Iraq, supported by the UN, is working to facilitate the safe, dignified and voluntary return of the remaining 1.8 million people.

The explosive hazard problem is complex, extensive, and exceeds the capacity of the existing resources to address it.

The Government, the UN, and other national and international stakeholders have prioritized the clearance of explosive hazards as the essential 'first step' before any rehabilitation or reconstruction work can be carried out on key infrastructure or residential buildings. Rehabilitation and reconstruction activities are critical to re-establish basic services and get people home safely to affected areas.

ACTIVITIES

UNMAS addresses the threat posed by explosive hazards in Iraq through three pillars of work:

1. Explosive Hazard Management

A blended approach, combining national and international commercial companies and NGOs, enables survey and clearance response in areas liberated from Da'esh in direct support of the Government of Iraq and UN humanitarian and stabilization plans. When requested through the UN system, UNMAS deploys assessment teams, followed by specialized teams including: survey, high-risk search, battle area clearance, mechanical assets, and/or debris management.

2. Capacity Enhancement

UNMAS supports a nationally led and implemented response. Building on existing capacities, UNMAS' focus is to provide training and technical advice to the Government of Iraq in various ministries: mine action authorities, Ministry of Interior (police and civil defence), and government operations coordination centres to support the management, regulation and coordination of response to explosive hazards. The "National Strategy and Executive Plan for Mine Action 2017-2021" was launched in December 2017 with support from UNMAS.

3. Risk Education

Coordinated with the UN Protection Cluster and the national authorities, risk education is provided to affected populations and humanitarian workers. Efforts are specifically targeting communities living in, or returning to, liberated areas known or suspected to be contaminated with IEDs and explosive hazards. UNMAS has provided national authorities with management training to improve coordination and management of risk education in Iraq.

FUNDING

UNMAS in Iraq is funded bilaterally through contributions to the UN Voluntary Trust Fund. **In 2018, UNMAS secured USD 76 million in funds.** To date, UNMAS in Iraq has received contributions from Australia, Canada, the Czech Republic, Denmark, Estonia, the European Union, Finland, France, Germany, Italy, Japan, Luxembourg, New Zealand (including in-kind support), Netherlands, Norway, Portugal, Republic of Korea, Sweden (including in-kind support), and the United Kingdom.

UNMAS is making consistent efforts to raise additional funds to respond to the needs for survey and clearance, risk education and capacity enhancement of government entities, and also to support the Recovery and Resilience Programme and the Humanitarian Response Plan.
